(Note that this question cannot be solved by the usual forward backward movement, because none of the five answers (on the answer sheet) match such an approach. This question is a “mirror code” type question. The letter W is four places in from the right end of the alphabet and its “mirror” is the letter that is four places in from the left end of the alphabet. So the “mirror” of W is the letter D. The letter T is 7 places in from the right end of the alphabet and therefore its “mirror” will be the letter that is 7 places in from the left end of the alphabet, which is the letter G. So the “mirror” of WT is DG. So the answer to the question is the “mirror” of UR i.e. FI.)
